Safety and Ordering

SAFETY

Avoid direct skin contact with both wet and dry cements. Avoid breathing cement dust by wearing a P1 or P2 dust mask suitable for airborne dust. Wear appropriate protective clothing and footwear.

Additional information in the form of material safety data sheets is available on request. Phone 1300-138-996.

FIRST AID

In the event of skin contact, wash with clean water to minimise possible irritation. If material gets into eyes wash immediately and repeatedly with eye wash solution or clean water.

PRODUCT INFORMATION

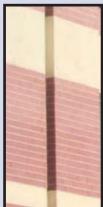

50/50 CREAMTM **FD/50 GREY**[™]

PRODUCT INFORMATION AND PROPERTIES

For the fastest, cleanest and most efficient mortar, Swan Cement takes the pain out of brickwork with its 50/50 Grey and 50/50 Cream blended cement products.

Its revolutionary range of brickies products allows builders, tradespeople or the home handyman to buy quality grey or cream cement pre-blended with Marvelime. The 1 bag mix design for 3.5 cubic foot mixer complies with Australian Standards for M3 mortar classification.

The 50/50 Grey and 50/50 Cream blended cement products provide the user with a standard 1:1:6 mix design when mixed correctly with 1 part blended product and 3 parts sand.

For either a rich cream mortar or for a standard grey mix, Swan Cement takes the guesswork out of the mortar.

So if you need quality mortar, mix your mortar with the best. Just ask your local hardware store for Swan Cement 50/50 Grey or 50/50 Cream cement blends.

Render Guide

Use	Substrate	Mix Ratios B	50/50 Grey or 50/50 Cream	
		50/50 Grey or 50/50 Cream	Plasterers Sand	Cement 20 kg Bags *
Internal Sand Finish				
Sand finish base coat	Clay Bricks	1	3.5	14
Sand finish top coat		1	3.5	14
External Sand Finish				
Sand finish base coat	Clay Bricks	1	3.0	16
Sand finish top coat		1	3.0	16

Render Notes:

Approximately 1.2m³ of damp plasterer's sand is required for 1m³ of render. Estimate based on 1m³ of render covering 100m² at 10mm thickness.

Mortar Guide

M3

M2

* per 1000 bricks

Mix	Masonry Exposure Environment						
M3 M2	coa nor coa gro Inte dry Exte 10k 1kr and	alls between 1km and 10km of a surf astline or between 100m and 1km of a on-surf coastline eg., estuary and astal river zones. alls in contact with fresh water or the bund in non-aggressive soils. ternal walls subject to wetting and ying of a non-saline character. ternal above ground walls greater than the of a surf coastline or greater than m of a non-surf coastline eg., estuary d coastal river zones.Interior walls not bject to wetting and drying.

General Notes:

• Use only recommended brickies sand free from organic contamination.

0.6

0.6

- Use a standard sized vessel eg., a bucket, to measure all materials.
- Any admixtures used should only bedded according to the manufacturers instructions.
- · Marvelime contains an air-entraining agent, therefore additional air entrainer is not required.
- · Quantities are typical industry usage and will vary according to brick type and individual waste patterns.
- · Please refer to AS3700 "Masonry Structures" for more detailed information.

General Notes:

- Use only recommended mortar and plastering sands free from clay and organic contamination.
- · Keep water content to the minimum required for mixing and placing. The more water, the lower the strength.
- Use a standard sized vessel eg., bucket to measure all materials.
- Admixtures should only be used according to the manufacturer's instructions.
- Quantities estimated are typical industry usage and will vary according to the individual use patterns.
- For additional DIY information please refer to www.swancement.com.au

50/50 Grey & 50/50 Cream Cement

Physical Properties

Parameter	50/50 Grey Typical	50/50 Cream Typical	AS1316-2003 Limits	Test Method
Water Retentivity	80%	79%	70% Min	AS1316
Air Content	21%	19%	10% Min	AS1316
Initial Set Time	1:30 hour:min	1:45 hour:min	75 mins (min)	AS1316
Final Set Time	2:30 hour:min	3:00 hour:min	12 hours (max)	AS1316
Soundness	0.05%	0.08%	1.00% Max	AS1316
Compressive	50/50 Grey	50/50 Cream	AS1316-2003	Test Method
Strength (1)	Typical	Typical	Limits	
7 day	28 MPa	30 MPa	3.5 MPa Min	AS1316
28 day	31 MPa	31 MPa	6.0 MPa Min	AS1316
Flexural Strength by Bond Wrench (2)	50/50 Grey Typical	50/50 Cream Typical	AS 3700 Requirements	Test Method
M3 - 1:3 mix 7 days	0.4 MPa	0.5 MPa	0.2 MPa	A\$3700

- (1) Ottowa Sand used for AS1316 tests.
- (2) Test mortars for flexural strength determination were batched in a 3 cubic foot mixer with commercially available brickies sand to give an initial flow of 125% to 150% and air content 10% to 15%. Bricks were 10 core Midland Brick Cream. Tested to AS4455 initial rate of absorption 0.8 - 2.5 kg/m2/min and characteristic compressive strength of 15MPa.
